Company: **GENOSCREEN**
Domaine: Biotechnology/ Genetics

Situation: 59 – Lille
www.genoscreen.fr

Activity of the company

Innovative company providing services in genomics and bioinformatics - we propose a large scale of services provision in molecular biology for different sectors (health, environment, agriculture, agro-alimentary, ...). We develop and commercialise software solutions associated to diagnostic kits for health industry.

Mission for this position

The main mission of the operations manager is to ensure the successful achievement of the deliveries, production and of the projects developed by the company under QMS.

As it concerns leading-edge evolutive activities, the operation manager has the responsibility of improving continuously the efficiency of the processed et the competitiveness of the products and services commercialized by the company.

The incumbent must direct, coordinate and lead the 3 services gathering around twenty collaborators, and, maintain numerous and strong interactions with the Procurement and R&D Departments and, moreover, with the Sales Department.

Regarding the services provision, these require a strong involvement of the chiefs of the team, but also from other co-workers in the conception/elaboration of offers, as well as, in the client relation before, during, and even after the realisation of the so-called services provided. In this context, the operations manager shall supervise these activities and validate the services offers on the technical and economical point of view. Similarly, his/her responsibility is engaged in the validation on the analyses realized and in the validation of the results sent to the clients.

More generally, the operations Director must actively participate to the development of good laboratory practices (GLP) and good manufacturing practices (GMP) by collaborating closely with the Quality Manager of the company.
